

The Only Artificial Intelligence  
Designed for the Financial Industry

**n5 FIN SKY**

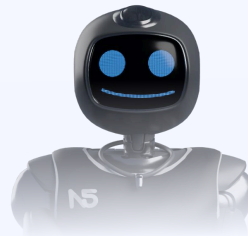

## Fin Sky (Autonomous Artificial Intelligence for the Financial Industry)

Fin Sky is an AI platform purpose-built for the financial industry. It addresses the limitations of traditional generative AI by prioritizing security, data protection, technical resilience, and accuracy.

### Alfred Assistant

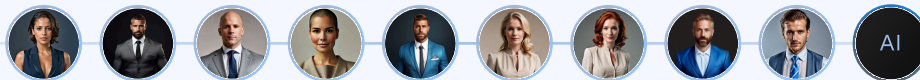

- Provides accurate, personalized answers based on approved content (no internet searches).
- Automates administrative tasks.
- Manages calendar and scheduling.
- Remembers the entire conversation history.
- Anticipates needs through proactive actions.
- Integrates with the financial institution's applications.

### Pep Coach

- Offers personalized coaching based on user activity.
- Identifies prospects with the highest likelihood of successful conversion.
- Analyzes top-performing colleagues' best practices to deliver tailored recommendations.
- Simulates real conversations with potential clients (Sparring Mode and Simulation Mode).
- Delivers feedback and scoring for continuous improvement.

The combined capabilities of Alfred and Pep create the Singular Executive—a role capable of managing large volumes of clients simultaneously, driving operational efficiency to unprecedented levels.

**Scalability:** Enables a single employee to oversee and manage thousands of clients or tasks with the support of Singular Executives.

**Efficient Oversight:** While it operates autonomously, it allows for human intervention to ensure service accuracy and quality—combining natural intelligence with AI-driven efficiency.

**Cost Reduction:** Significantly lowers operational costs, making sales, collections, and service viable across all customer segments.

**Financial Inclusion:** Empowers financial institutions to profitably serve potential clients who are currently excluded from traditional services.

**Advanced Integration:** Seamlessly integrates with various applications, enhancing operations without requiring the replacement of existing technology infrastructure.
